

Sawn Timber

Find your local supplier of quality hardwood timber through ASHS. Our members are Scottish sawmills and timber merchants who supply Scottish sawn timber throughout the UK. They cut a range of hardwood timbers, including oak, elm, sycamore, ash and beech as well as quality softwoods - Douglas fir and European larch.

ASHS members supply both air dried and kiln dried Scottish hardwoods. Kiln dried boards are usually waney edged and are available in various thicknesses. For more information on the timber stocks that each sawmill or supplier holds, look at the hardwood supplier pages on this website.

Scottish wood can be used for interior joinery, furniture making,

carving and turnery. Scotland's oak, cherry, elm, and sycamore have been used to make fine furniture for generations.
