

Social Housing Inverurie Project, Aberdeenshire

The Inverurie project involves building a small development of 34 houses for Castle Hill Housing Association. The architects for the project are Mike and Sue Thornley, Glasgow, whose design proposals resulted in their winning the Sustainable Housing Competition and being awarded the design contract by Castle Hill.

Almost all of the exterior walls in the development are clad in timber, most of which is larch with some Douglas Fir. The cladding is made from square edge boards, which have been left rough sawn and will not be treated.

The timber was supplied by several ASHS members including Frank Gamwell of FG Woodland Services.
